

Our twin stars were born on 8th July-2014 at 32 weeks gestation age due to maternal hypertension. Unfortunately on second day the twin-2 male baby was severely infected by LISTERIA bacteria due to which baby becomes lethargic and gradually deteriorated (i.e. breathing difficulty, coagulation profile damaged & high kitionbody).

Fortis Anandapur NICU team led by Dr SUMITA SAHA has successfully overcome the critical situation that brought our baby to perfection. Dr Saha's utmost effort, devotion and kind care was all that is behind our happiness and satisfaction.

Thanks to the divine touch of Dr. Sumita Saha.
